Welcome to Maths Online either as a new user or as a returning student. Set tasks will be set by the teacher on a fortnightly basis. There will be times when the set tasks will be given to the whole class and there are other times when I will tailor individual tasks according to strengths and needs.

Parents are able to access the new parents area. This section helps parents monitor student progress. There is a function whereby you can list up to two email addresses and regular reports will be emailed to you from the website.

Many children complete the tasks within the given time. They need to achieve a 90% success rate for the skills to be considered mastered. The teacher is able to give tasks up to and including those from the Year 4 curriculum. Some children ask for extra tasks to be given to them. This is possible but the following needs to be considered:

1. They may run out of tasks by the end of the year.
2. They could access tasks that have not been taught in class.

Some tasks can be given to the children twice (perhaps if the level was too hard at the beginning of the year). This means that the original tasks will need to be unallocated and then reallocated as the program prevents a task being given twice.

Alternatively (and strongly recommended), children are able to practise recall of basic number facts in the section called Speed Skills. This is vital as children must be fluent operators, have good calculation skills and the ability to apply Maths to real life situations. I recommend level 3 for Year 4 but practice at a lower level may be necessary.
